

A SAFE PURSUIT OF BEAUTY  
WITH GORE-TEX  
NOSELIFT

Changes in the appearance of the nose have a profound effect on overall facial aesthetics. Minimal alterations can dramatically improve one's appearance which usually leads to the enhancement of the patient's self-confidence. Feelings of inferiority, awkwardness and anxiety are often replaced by pleasure and boost on self-esteem. However, the pursuit of nasal beauty has to be achieved without any significant trade-off.

Dr. Levi Lansangan of Shimmian Manila Surgicenter, the pioneer of GORETEX noselift in the Philippines, member of the advanced rhinoplasty research team in Asia and the author of "Sub-Nasale Flap" published recently in Plastic Reconstructive Surgery Journal has dedicated his life in the pursuit of safe alternatives for nasal enhancement. His dedication, surgical foresight and extensive years of experience in nasal craftsmanship have brought him local and international recognition among patients and aesthetic surgical societies.

Working among the nasal surgery masters for several years, he has developed a technique to deliver a safe, worry-free, and silicone-free noselift using GORE-TEX implant, an advanced FDA approved material for the repair or enhancement of the soft tissues of the facial area including nasal augmentation.

Thousands of silicone implant removed by Dr. Lansangan

Unlike with silicone implant wherein tissues simply encapsulate around it, GORE-TEX has the ability to incorporate into the surrounding tissue thus eliminating material rejection, eventual nasal contractions and other complications. GORE-TEX implant's pore sizes range from 0.5 to 30 microns. Over time, human tissues grow into these empty spaces within it helping anchor the implant in the treated area. This natural and rapid growth of tissues within and through the implant allows our bodies to treat it as something not foreign.

This implant provides permanent natural-looking results, requires no allergy-testing and can be trimmed to fit. Given the durability of GORE-TEX and the body's acceptance of it, this material lasts a lifetime. #

Which do you prefer?

Silicone Implant

a **hard silicone implant** that is **artificial-looking** and prone to **nasal contraction**

(Reference: British Journal of Plastic Surgery 24:405-411, 1971; "Complications of Silastic/Silicone Implant")

or

GORE-TEX Implant

a **SOFT, FLEXIBLE** nasal implant that provides a **NATURAL-LOOKING** noselift

Experience the difference of a

# GORE-TEX Noselift

A safe, **WORRY-FREE** approach

in crafting the **IDEAL NASAL PROFILE**

Advantages of GORE-TEX implant

- no risk of nasal contraction
- no cases of material rejection in over 700,000 clinical uses
- assures comfort and safety enabling the patient to still engage in active sports
- allows growth of human tissues through the implant treating it as something not foreign to our bodies
- judged as the **BEST IMPLANT** material by many nasal surgery masters

Before After

SHIMMIAN MANILA SURGICENTER is the Philippine's 1st Advanced Reconstructive Rhinoplasty Clinic to introduce facial cosmetic harmony and GORE-TEX noselift.
